U.B. PLASTICS LTD.

U.B. Plastics Limited was established in 1983, the brainchild of the late David Cox formerly of Winter Cox Limited, manufacturers of wooden shives (bungs), keystones (faucet plugs), porous and hard pegs for more than 60 years. Together with the technical and commercial input of Roy Caswell, the current Managing Director of U.B. Plastics, a complete range of plastic products were developed. These plastic products were technically and environmentally superior and more economic than their wooden predecessors. U.B. Plastics also developed a range of plastic keg caps for the rapidly growing keg beer market. Our customer base includes Coors U.K, Inbev, Carlsberg, Diageo, Greene King and Fullers.

U.B. Plastics Limited is situated in Burton on Trent, Staffordshire in the heart of England. The town is famous for its unique source of underground water, which is pure and especially suited for the brewing of beer. This has resulted in the area becoming the centre of Brewing in England.

U.B. Plastics Limited are now the largest manufacturer of plastic moulded products for the beer brewing industry, supplying the U.K, Ireland and mainland Europe. We have now formed a relationship with Eurosource Inc. of Dallas, Texas who are successfully marketing and selling our products in the U.S.A.

2 Piece Plastic Shive

- Consists of 2 mouldings - inner and outer shive, and easily extractable in one piece either by hand or machine.

Shive Inner

- Tough polythene moulding designed to withstand the force of being hammered into the cask
- Can be manufactured in any colour for easy product identification, also printable.

Shive Outer

- Soft thermoplastic assembled around the shive inner, providing an excellent seal
- Colour coded to identify 6 different sizes manufactured to suit any cask bush.

Keystone

- Standard or "tutted" configuration
- Tough thermoplastic elastomer giving an excellent seal
- Capable of withstanding high temperatures of a washed cask
- Easily extractable in one piece, either by hand or machinery.

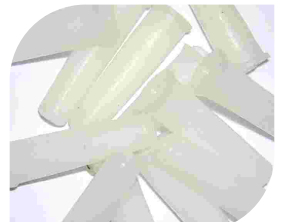

Keystone Sealing Bung

- Works in conjunction with our keystone, and is extracted in one piece along with the keystone
- More economical alternative to cork
- Manufactured from 100% recycled material.

Plastic Hard Peg

- Manufactured from H.D.P.E. (High Density Polyethylene)
- This product offers excellent sealing properties
- Fully recyclable.
